Tornado Introduces BR Vario II

Chicago — Tornado Industries has unveiled the BR Vario II, an environmentally preferred, compact, lightweight floor machine with 650 RPM of cleaning power — over six times higher than the speed of comparable rotary brush automatic scrubbers. The BR Vario II utilizes cutting-edge cylindrical brush technology to tackle floor surfaces from tile and cement to paver bricks, raised rubber disc, quarry tile, and other challenging applications. Other features include a solution tank, collapsible handle, and contact pressure six times greater than that of a single disc machine.

A unique feature of the BR Vario II is that it can strip and scrub without the normal slinging of water seen in traditional rotary floor machines. The BR Vario II provides unmatched speed and efficiency for large areas, while allowing close edge cleaning along walls and other obstacles. The BR Vario II's handle turns 90 degrees allowing the operator two-dimensional cleaning performance in all directions: left, right, forwards, and backwards.

Tornado's BR Vario II cylindrical brush machine is designed for environmental sustainability. The use of cylindrical brushes conserves natural resources including water, solution and source materials. This unit is perfect for use in any facility with porous, or uneven, hard floor cleaning challenges, including retail stores.
